

THE GTi

THE FLOPPY FLINGER THINGER

A touchscreen for your Gotek / FlashFloppy. Your whole Amiga library as cover art.

Scroll with your thumb. Tap INSERT. The Amiga boots it. That's the whole trick.

BROWSE LIKE IT'S 2026

Cover art + game blurbs for every title

REEL: full coverflow carousel - flick through your library like a jukebox

ROLL: dice-roll lucky dip picks your game

Favourites, play counts, A-Z jump, multi-disk

Six themes / three font sizes / any rotation

Gallery screensaver - your JPGs, bouncing

Authentic demoscene cracktros at power-on

FLING IT WIRELESSLY

A tiny wireless dongle sits in the Gotek's USB port

The screen sends disks over WiFi - from anywhere in the room. No cable to the Amiga at all.

One screen can feed a whole WALL of Amigas

Multicast a disk to every machine at once

Or go classic: USB lead straight to the Gotek (standalone mode, no dongle needed)

SENSIBLE WHERE IT COUNTS

Tapping a game never mounts it - INSERT is a deliberate button. No accidental swaps.

Built-in Amiga Test Kit diagnostic disk

Flash from your BROWSER - no IDE, no drivers

Blank SD card sets itself up on first boot

Off-the-shelf hardware - no unobtainium parts

NEW - IN PUBLIC BETA NOW

SAVE-GAME PERSISTENCE. The floppy remembers.

In-game saves come back to the SD card as

GameName.sav.adf - beside the untouched master

Works standalone AND over WiFi (the dongle hands your save back across the room)

Delete the .sav = factory-fresh game again

LIVE DEMO AT THIS TABLE - ask for a go on the reel

As many games as you have room for, one thumb. Watch a disk fly across the room onto a real Amiga. PS: it's haunted.

ORDER ONE, HAVE IT POSTED - READY-TO-RUN KIT: GBP 50 DELIVERED

Flashed screen + printed case + wireless dongle + leads + SD card

PayPal: mesarim@hotmail.com - pop your postal address in the payment note

FLASH IT NOW

browser flasher - just a USB lead

THIS SHEET, DIGITAL

take it home in your pocket

SOURCE + DOCS

everything is open
